Professional Summary

- Emerging AI and Data Science professional with a rigorous grounding in machine learning, full-stack architecture, and algorithmic problem-solving.
- Proven capacity to develop AI-powered applications and real-time analytics platforms using Python and Java, with emphasis on efficiency and user-centric design.
- Demonstrated experience across hackathons and industry-aligned projects, reflecting a disciplined, resourceful approach and a growing interest in cloud and DevOps practices.

Experience

Lysa Solutions – Industry Project Intern

Saibaba Colony, Coimbatore

[Month Year]

One-Month Industry Project

- Completed an intensive one-month industry project at Lysa Solutions, Saibaba Colony, gaining direct exposure to professional software development workflows, debugging, and structured engineering practices.
- Applied academic knowledge within an industry-oriented environment, navigating project requirements and delivery milestones while strengthening practical problem-solving and implementation skills.

Projects

Smart CNC Production Scheduler | *React, TypeScript, FastAPI, Python, Supabase, Docker*

- Developed a production scheduling system prioritizing manufacturing tasks by priority level, due-date urgency, execution status, sequence, and completion progress.
- Implemented dynamic rescheduling to automatically reassign affected tasks during machine breakdowns, maintenance, overload, or operator unavailability.
- Built machine-selection and schedule-validation logic using machine compatibility, health, queue length, capacity, and operator availability while preventing scheduling conflicts and time overlaps.

Sustatio – Smart Waste Management Platform | *React, Tailwind CSS, Supabase*

- Developed a full-stack sustainability platform to streamline waste segregation, tracking, and recycling workflows in support of circular-economy principles.
- Built a responsive interface using React and Tailwind CSS, integrating Supabase for backend data management and application workflows.
- Presented the platform at Smart India Hackathon 2025, demonstrating its practical relevance and innovation potential.

AI Plant Disease Detection | *Kotlin, TensorFlow Lite, MobileNetV2*

- Engineered an Android-native plant disease detection application leveraging TensorFlow Lite and MobileNetV2 for on-device image classification.
- Achieved 90–98% prediction confidence through a fully offline inference pipeline, enabling crop-disease identification without continuous internet connectivity.

Technical Skills

- Tools:** VS Code, Google Colab
- Programming:** Python, Java, R, C
- Web Development:** HTML, CSS, JavaScript, FastAPI
- Databases:** Supabase, MongoDB
- DevOps:** Git, GitHub, Docker, Linux
- Core:** Data Structures & Algorithms, OOP, DBMS, Operating Systems

Education

Dr. N.G.P. Institute of Technology, Coimbatore

B.Tech – Artificial Intelligence & Data Science

2024 – Present

CGPA: 8.15 / 10

Vidyaa Vikas International School

Higher Secondary Education (CBSE)

2022 – 2023

80%

Achievements & Activities

- Winner – Idea Matrix 2024**, Suguna College of Technology, Coimbatore (1st Place); **Winner – Department-Level Project Expo 2025**, Dr. N.G.P. Institute of Technology (1st Place).
- Participated in **MIT Samhita'25 Hackathon**, Madras Institute of Technology; presented **Sustatio – Smart Waste Management Platform** at Smart India Hackathon (SIH) 2025.
- Completed **Innovation Ambassador Foundation Level Training Program**, AICTE.

Certifications

- IBM Artificial Intelligence Fundamentals | Microsoft Azure Fundamentals & DevOps
- MongoDB Basics | NPTEL Cloud Computing (2025)
- HackerRank Python Certification | HackerRank Java Basic Certification
