
PROLOGUE

AI & Data Science student with hands-on experience building full-stack applications and ML-powered systems. Proven ability to deliver real-world software through projects spanning Android development, fraud detection, and waste management platforms. Eager to contribute to scalable software as part of an engineering team.

SCHOOLING

B.Tech – Artificial Intelligence & Data Science | Dr. N.G.P. Institute of Technology 2024–Present |
CGPA: 8.06 | 12th Grade – CBSE | Vidyaa Vikas International School 2022–2023

ENDEAVORS

AI Plant Disease Detection: A hybrid ML model (Autoencoder + XGBoost) that identifies fraudulent transactions in real time, built with Python and integrated with a React-based dashboard for monitoring alerts..

Sustastio – Waste Management Platform: A full-stack web platform built with React, TypeScript, Tailwind CSS, and Supabase — featuring smart waste segregation and circular-economy features. Presented at SIH 2025 (National Level, AICTE) and UDHAYAM'26.

FinSentinel – Fraud Flagging System: An Android app (Kotlin, TensorFlow Lite, MobileNetV2) that detects plant diseases from leaf images in real time with 90–99% confidence, deployed on device without internet dependency.

PROFICIENCY

Languages - Python, Java, SQL

Tools - GitHub, VS Code, Android Studio

Cloud & AI - Docker ,Azure AI Foundry, MongoDB, Atlas Vector Search, Supabase

ML Frameworks -TensorFlow Lite, XGBoost, scikit-learn

CERTIFICATION

IBM - Artificial Intelligence Fundamentals

Microsoft - Azure , DevOps

MongoDB , HP LIFE

HackerRank — Python , java Basic Skill Certification

NPTEL - Cloud Computing (2025)

ACHIEVEMENTS & ACTIVITIES

Participated in MIT Samhita'25 Hackathon — Madras Institute of Technology, Chennai

Presented at Smart India Hackathon (SIH 2025) — National Level, AICTE

Presented at UDHAYAM'26 — National Level Innovation Showcase

Participated in MECHNOTRON 2K26 Hackathon — National Level, Coimbatore Institute of Technology

Completed Innovation Ambassador Foundation Level Training
